

EXPERIMENT- 1

(1) AIM:

To design a responsive and interactive web interface for a food delivery system using HTML, CSS, Bootstrap, and JavaScript.

Tasks:

- Create a responsive homepage using Bootstrap grid system.
- Design sections: Restaurants, Menu, Offers, Cart, Contact.
- Implement responsive navigation bar with search functionality.
- Use Bootstrap components such as cards (for food items), carousel (for offers), and modals (for item details).
- Implement filtering of food items based on category (veg/non-veg, price, cuisine) using JavaScript.
- Add dynamic cart UI (add/remove items, update total).
- Ensure responsiveness across devices.

PROCEDURE:

1. Install Python, MySQL, and required libraries.
2. Create the grocery_db database and import the SQL file.
3. Configure database settings in config.py.
4. Run the application using python app.py.
5. Open <http://127.0.0.1:5000> in a web browser.
6. Register/Login as a customer or admin.
7. Manage products, orders, and customers through the application.
8. Verify all functionalities are working correctly.

ER DIAGRAM:

DFD DIAGRAM:

CODE:

FRONTEND:

```
<form action="/login" method="POST">
<input type="email" name="email" required>
<input type="password" name="password" required>
<button type="submit">Login</button>
<link rel="stylesheet" href="/static/css/style.css">
<script src="/static/js/script.js"></script>
```

BACKEND:

```
@app.route("/login", methods=["GET", "POST"])
def login():
    email = request.form["email"]
    password = request.form["password"]
    cur = mysql.connection.cursor()
    cur.execute("SELECT * FROM customers WHERE email=%s", (email,))
    user = cur.fetchone()
```

DATABASE:

```
app.config.from_object(Config)
mysql = MySQL(app)
```

```
class Config:
    MYSQL_HOST="localhost"
```

```
MYSQL_USER="root"  
MYSQL_PASSWORD="*****"  
MYSQL_DB="grocery_db"
```

USER AUTHENTICATION:

```
if user and check_password_hash(user["password"], password):  
    session["customer_id"] = user["customer_id"]  
    session["customer_name"] = user["full_name"]  
    return redirect("/dashboard")  
else:  
    flash("Invalid Email or Password")
```

PRODUCT MANAGEMENT:

```
cur.execute("""  
SELECT product_id, product_name, price, stock  
FROM products  
ORDER BY product_name  
""")  
products = cur.fetchall()  
return render_template("products.html", products=products)
```

SHOPPING CART:

```
cur.execute("""  
INSERT INTO cart(customer_id, product_id, quantity)  
VALUES(%,%,%)""",(customer_id, product_id, quantity))  
mysql.connection.commit()  
flash("Product Added Successfully")
```

ORDER PROCESSING:

```
cur.execute("""  
INSERT INTO orders(customer_id,total_amount,payment_method)  
VALUES(%,%,%)""",(customer_id,total,payment))  
mysql.connection.commit()  
return redirect("/orders")
```

ADMIN DASHBOARD:

```
cur.execute("SELECT COUNT(*) AS total_products FROM products")  
products = cur.fetchone()  
cur.execute("SELECT COUNT(*) AS total_orders FROM orders")  
orders = cur.fetchone()  
return render_template("admin/dashboard.html")
```

LEARNING OUTCOMES:

1. Learn how to create a website using Flask.
2. Understand how the frontend and backend work together.
3. Learn to connect a website with a MySQL database.
4. Learn to store, retrieve, update, and delete data from the database.
5. Understand how an online grocery shopping system works.
